CCTV Installation

The Problem

TK Maxx was looking to modernise its CCTV estate, moving away from outdated coaxial systems and investing in IP-based technology.

By upgrading to a networked solution, they wanted the flexibility to access and monitor cameras remotely, rather than being limited to on-site viewing. A crucial step in strengthening both security and convenience across stores.

What We Did

In partnership with Argenbright Security, we delivered a complete end-to-end solution. From configuring and installing CCTV cameras, to setting up the comms cabinet and deploying brand-new network switches.

Together, we managed both straightforward camera replacements and the installation of new units in entirely new locations. Drawing on our combined expertise in cabling and security integration, we tackled the complex routing challenges of older venues, often going the extra mile (and even through the floor) to ensure the project was completed to the highest standard.

On average, 25 cameras were installed per site

Why Did TK Maxx Choose Us?

TK Maxx needed a partner they could trust to deliver consistently across a diverse store estate. Working in partnership with Argenbright Security, our international engineering reach and breadth of expertise gave them confidence we could handle projects at scale while adapting to the unique challenges of each site. As a German-headquartered retailer with a strong European presence, TK Maxx values the joint ability of our teams to bring clear processes, robust project management, and open communication to every stage of the rollout. Together, we provide more than just technical expertise, we deliver a dependable partnership built on successfully executing complex projects.
