

OVERVIEW

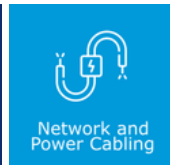

When TK Maxx set out to modernise its CCTV estate, the goal was not just to replace outdated systems, but to create a more flexible, future-ready security solution across stores. Working in partnership with Argenbright Security, Celestra delivered a complete end-to-end rollout, upgrading legacy coaxial infrastructure to IP-based technology, installing and configuring cameras, deploying new network switches, and overcoming the practical challenges of older sites.

The project gave TK Maxx the ability to monitor cameras remotely while benefiting from a delivery partner with the scale, expertise, and reliability to manage a complex multi-site programme.

SERVICES PROVIDED

WHAT WAS THE CHALLENGE

TK Maxx wanted to bring its CCTV estate up to date by replacing outdated coaxial systems with modern IP-based technology. The move to a networked solution would give teams the flexibility to access and monitor cameras remotely, rather than being restricted to on-site viewing. It was an important step towards improving both security and day-to-day convenience across the store estate.

WHAT WE DELIVERED

In partnership with Argenbright Security, we delivered a complete end-to-end solution covering every stage of the rollout. This included configuring and installing CCTV cameras, setting up the comms cabinet, and deploying brand-new network switches. Together, we managed both straightforward camera replacements and the installation of new units in entirely new locations. By combining our expertise in cabling and security integration, we were able to overcome the complex routing challenges often found in older venues, going the extra mile, and sometimes even through the floor, to make sure the project was completed to the highest standard.

WHY DID ASEL CHOOSE CELESTRA?

ITK Maxx needed a partner it could rely on to deliver consistently across a varied store estate. Working alongside Argenbright Security, our international engineering reach and breadth of expertise gave them confidence that we could deliver at scale while adapting to the specific challenges of each site.

As a German-headquartered retailer with a strong European presence, TK Maxx also valued the way our teams brought clear processes, robust project management, and open communication to every stage of the rollout. Together, we offer more than technical expertise alone. We provide a dependable delivery partnership built on the successful execution of complex projects.

PROJECT HIGHLIGHTS

- On average, 25 cameras were installed per site
